

CES begins today with mostly keynotes and presentations. Pretty boring visually. I'm going to do something on what everyone is talking about this year. AI. At last year's CES no one was even mentioning ChatGPT but generative AI is everywhere. I'm going to look at where we might see AI next.

ON-CAMERA TEASE

THE WORLD'S BIGGEST ELECTRONICS SHOW IS UNDERWAY IN LAS VEGAS. I'M JAMEY TUCKER COMING UP WITH THE BIG STORY EVERYONE'S TALKING ABOUT AND SOME GADGETS COMPANIES HOPE YOU'LL BE USING SOON.

ANCHOR INTRO

CES, OTHERWISE KNOWN AS THE BIGGEST CONSUMER TECHNOLOGY SHOW IN THE WORLD, KICKED OFF MONDAY IN LAS VEGAS.

COMPANIES FROM ALL OVER THE WORLD LAUNCH NEW PRODUCTS AND INVENTIONS AND HOW TECHNOLOGY IS CHANGING THE WORLD. OUR CONSUMER TECHNOLOGY REPORTER JAMEY TUCKER IS THERE WITH WHAT EVERYONE IS TALKING ABOUT THIS YEAR.

PACKAGE SCRIPT

Funny when you think that this time last year, no one at CES was talking about Chat GPT. Today generative AI is what everyone is talking about.

(sound of music coming from the Hisense Stage)

TV manufacturers will be introducing AI tools to better recommend shows to watch and deliver targeted ads. "To blend our hard ware and software solutions to truly improve people's lives".

Imagine using your TV screen as you do your smartphone screen. It's coming. But CES is also about small companies with big ideas.

There's the Looie, a portable luxury bathroom to replace gross porta-potties at events.

“Everyone of these is attended...so if you want the VIP experience you can pay for a fast pass, you can get in the pit, have fun, go to the bathroom and get back all for a \$25 fee up front.”

An ice cream machine that uses soda type cans to make ice cream in about 2 minutes.

Holograms for video meetings

If you're like me you use readers, these digitally make it so you can see things up close and will auto-correct so you can see far away.

And then the Swapply, a portable battery changer, not charger.

This is the battery pack which you can install on your phone or phone case,

When the battery is depleted, insert the phone into the Swapply device. It removes the old battery and installs a new one.

In 7 seconds you auto swap your battery and you're good to go.

The exhibit floor opens Tuesday where we'll see many more new products and inventions. And I'll be here all week to show them to you.

ANCHOR TAG

OVER 130-THOUSAND PEOPLE ARE IN LAS VEGAS FOR CES. WHILE MANY COMPANIES ARE INTRODUCING GADGETS FOR THE CONSUMER MARKET, MANY OTHERS ARE DEMONSTRATING TECHNOLOGY THEY HOPE TO SELL TO ESTABLISHED BRANDS.

WEB STORY

It's funny when you think that this time last year, no one at CES was talking about Chat GPT. Today generative AI is what everyone is talking about.

From autos, to kitchen appliances, toothbrushes and TVs, generative AI or artificial intelligence is coming.

TV manufacturers will be introducing AI tools to better recommend shows to watch and deliver targeted ads.

Imagine using your TV screen as you do your smartphone screen. It's coming. But CES is also about small companies with big ideas.

There's the Looie, a portable luxury bathroom to replace gross porta-potties at events.

"Everyone of these is attended," explained Looie inventor Cutler Whitely. "If you want the VIP experience you can pay for a fast pass, you can get in the pit, have fun, go to the bathroom and get back all for a \$25 fee up front."

I've already seen an ice cream machine that uses soda type cans to make ice cream in about 2 minutes.

Several displays from companies demonstrating the use of Holograms for video meetings

If you're like me you use readers. I found a pair of glasses tht digitally make it so you can see things up close and will auto-correct so you can see far away.

And then there is Swapply, a portable battery changer, not charger.

It is a battery pack that installs on any smartphone. There's also a Swapply device that stores fully charged battery packs.

When the battery is depleted you insert the phone into the Swapply device which removes the old battery and installs a new one. Rather than plugging in a dead phone for a 45 minute charge, Swapply gives you a fully charged battery in about seven seconds.

Swapply will introduce the devices later this year with a focus of adding them to airports and businesses.

The exhibit floor opens Tuesday where we'll see many more new products and inventions. And I'll be here all week to show them to you.
